

AI-VERSE

Team Name : Speedwagon Foundation

Team Leader Name : Anirudh Jayan

Track : Agentic AI

This Agentic AI Career Assistant built around a Career Digital Twin that continuously a user's skill depth and learning behavior . A simulation engine compares these paths and selects the most effective option for the user while explaining trade-offs and opportunity costs. As the user progresses, the digital twin updates and career simulations are re-run, enabling adaptive, long-term, and personalized career guidance.

Novelty :

- Automatically re-evaluates the Career Digital Twin every week
- Generates weekly learning and skill-building tasks
- Adjusts task difficulty based on user progress and market pace
- Conducts scheduled mock interviews aligned with target roles
- Re-runs career simulations without waiting for user input
- Saves months of effort by avoiding wrong career paths
- Acts as a persistent AI mentor, not a one-time advisor
- Adapts guidance to how fast the user actually learns

List of features offered in the solution:

- **Career Digital Twin** – Continuously models skill depth, learning speed, and user growth
- **Skill Gap Intelligence** – Identifies fine-grained weaknesses beyond surface-level skills
- **Career Simulation Engine** – Simulates multiple future career paths with success probability, risk, and time-to-readiness
- **Explainable Career Readiness Index** – Data-driven readiness score with clear reasoning
- **Opportunity Cost Analysis** – Shows trade-offs and ROI of choosing one career path over another
- **Adaptive Career Autopilot** – Dynamically plans weekly skills, projects, and goals
- **Closed-Loop Learning** – Updates recommendations using progress, failures, and outcomes
- **Transparent AI Mentor** – Explains *why* each recommendation is made, building trust

Use-case diagram

Core AI Technologies

- **NLP & Resume Parsing**
Skill extraction, role matching, readiness scoring
(BERT / Sentence Embeddings / spaCy)
- **Large Language Models (LLMs)**
Career guidance, weekly plans, mock interview Q&A
(GPT / LLaMA / Mistral)
- **Machine Learning Models**
Career readiness scoring & progress tracking
(Regression / XGBoost)
- **Recommendation Systems**
Career simulation & learning resource suggestions
(Embedding similarity + content-based filtering)
- *Speech to text and Text to speech models for mock interviews*

System & Infrastructure

- **Backend:** Python (FastAPI / Flask)
- **Frontend:** React / Streamlit
- **Database:** PostgreSQL / Vector DB (FAISS)
- **Cloud:** AWS / GCP

Hardware Requirements

- Laptop / Cloud compute
- Microphone (for mock interviews)

Architecture diagram of the proposed solution

Thank You!
